Crime, Charts & Clarity – Tableau Project-July 2025
This isn't just about visuals — it's about making crime data speak. I worked as a Business Data Analyst in the police department's research wing, turning raw criminal activity data into something insightful and actionable.
I explored time-based trends, mapped crime hotspots across the region, built interactive dashboards, and cleaned messy reports into clear visuals using Tableau. Every click on the dashboard brought law enforcement one step closer to smarter decisions — from crime prevention to effective response.
What made it fun? Real-world impact. This wasn't about looking at numbers — it was about decoding behavior, spotting patterns, and helping officers turn reports into results.
The data was complex. The mission was simple clarity in chaos.
